## SMALL SORTER

&

## LARGE SORTER

## MAIN FUNCTIONS

- grading flower by size, wet or dry
- making perfect joint material
- sifting macerated trim before extraction

Sorting flower by size allows cultivators to ensure each package from a harvest batch contains the same proportion of small buds and large buds, or allows for the removal of small buds entirely. This is especially useful to maintain quality control of large quantities of machine trimmed bud, or before dry trimming.

**Creates an ideal particle size for joints.**  
Often times material is ground too finely in an effort to get rid of larger chunks and stems, which ultimately makes joints that burn hot and run. Grinding gradually and separating out appropriately sized material before it is ground too finely makes perfect joint material. 5 lbs can be prepared using this method in 30 minutes or less. Guaranteed not to tear or rip papers.

**In extraction, machine time is money.**  
When trim is finely ground one can fit two times the weight in each column than if the trim is not ground, but this often leads to channeling, which reduces yield. This is because stems or chunks of cannabis miss the grinder and create pathways in the powdery material. Sifting material before extraction reduces this substantially.

### DIMENSIONS

D = 600 mm

Our small sorter is great for medium sized facilities and extractors. Sorts 80 lbs / hr dry

### BENEFITS

Fits through a standard door

### DIMENSIONS

D = 1000 mm

Simply put, our large sorter is a beast. It can easily sort 150 lbs / hr dry

### BENEFITS

Fits 5 QC workers around sorter
